

1. Our company

INTERPLAST manufactures plastic pipes and fittings to the very highest specifications, for use in water supply, heating and sewage systems covering a broad range of applications in the areas of house construction, technical projects and industrial facilities.

The Group's central offices are located in Sindos, the industrial area of Thessaloniki, coordinating the day-to-day manufacturing activity of the industrial units:

- in the Komotini Industrial Zone in an area of 26,000 sq m, where the plastic pipes and fittings (PE, PP-R & PVC) plant is located;
- in Menidi, Attica, in an area of 6,000 sq m, where Interplast's Athens branch and the brass fittings plant of its affiliated company ELVIOM S.A are located.

Our Philosophy

Dynamic, hard-working people with great skills and know-how.

A first-rate company among the elite of the most renowned European manufacturers in the field.

Steady path towards development.

Production capacity that safeguards the present and lays solid foundations for the future.

Adoption of vertically integrated structures for the manufacturing process.

Stringent quality control.

These are just a few of the basic values underlying our philosophy, values which also ensure that you, our customers, receive final products of the highest quality.

Because our strength lies in our consistency, reliability and the relationship of trust that we build with both our customers and partners.

Because we believe that those are the values that turn a company into a standard setter.

Our Work

Steady growth has secured a leading position for Interplast in the Greek market in the sale of plastic piping for water supply and heating systems.

This is evident from our major contribution to works such as the Olympic village, the radical refurbishment of the historic "Grande Bretagne" hotel, the two largest shopping centres in Greece, The Mall, Maroussi, Athens and the Mediterranean Cosmos, Thessaloniki, not to mention our participation in a large number of construction projects for hotels, hospitals and housing.

At the same time our dynamic and steady investment, plus the exporting of our products to over 25 countries throughout the world is proof that "development never stops".

This is the motto governing our manufacturing process; we put it into practice, it becomes a work of quality, competitiveness, the needle of a compass steadily guiding us to the top.
